

What is Cloud?

Cloud Computing is an *approach to computing* that leverages the efficient pooling of on-demand, self-managed infrastructure, consumed as a service.

Efficiency thru Utilization and Automation

Pooling

From machines to highly elastic resource pools, with on-demand capacity

Zero-touch Infrastructure

Policy-driven automation of provisioning, deployment and management

Freedom of Choice

Open & Interoperable

Application mobility between clouds, based on open standards

Leverage Existing Investments

Benefits of cloud computing to existing applications and datacenters

Agility with Control

Self-Service

Easy access with policy-based provisioning and deployment

Control

Application-aware infrastructure with built-in availability, scalability, security and performance guarantees

Designed for the specific needs of each enterprise—not a “one-cloud-fits-all” approach like most cloud offerings

Able to leverage the investment in existing IT resources

Uniquely aligned to each enterprise’s business and its approach to IT

Flexible enough to securely use both on and off-premise resources

An incremental, not wholesale, change

30
Cloud
VARs
that **GET IT**

Why Choose E-Safe Technologies for your cloud needs?

E-Safe Technologies was recognized in CRN Magazine’s article, *30 Cloud Vars that Get IT*. This article recognized IT companies across the nation that were on the cutting edge of cloud computing adopting it before the market was formed.

E-Safe was recognized as designing and building secure cloud computing infrastructures by considering a company’s needs and working to identify and build solutions around compliance, business continuity, risk assessment and disaster recovery.

Cloud Offerings

CloudVM

Are you in need of a highly available server but don't have the infrastructure to support it? Allow E-Safe to host this server in our Cloud.

Our secure and compliant Cloud is the perfect place for your business' critical servers to reside

Starting at \$125/month per server

CloudBackup

Don't like tapes? Is setting up a secondary data center for off-site backup too expensive? Allow E-Safe to provide Cloud Backup services for you. Our award winning secure and compliant data center has the storage you need for offsite backup storage. We are able to integrate and support many storage and backup vendors with our open architecture.

Starting at \$1/month per GB

CloudDR

Are you looking for a DR plan, but don't have a second location to replicate too? Is the investment in warm hardware overwhelming? Use E-Safe's Cloud DR service to provide your business with the security of having a low RPO/RTO disaster recovery plan that can be brought up in minutes, not days.

CloudDesktops

Are you tired of managing and supporting desktops? Is the infrastructure for desktop virtualization too costly?

E-Safe is proud to offer Cloud Desktops. Your desktops, running in our cloud.

CloudDev

Sick of worrying about infrastructure and overhead when developing custom applications? Our best-of-breed Java stack for delivering production solutions in the cloud are the perfect solution. From IDE-to-application server, including database management and application monitoring, our CloudDev platform gives you a complete production runtime with zero complexity and enterprise grade performance.

Cloud can be confusing.
Your cloud doesn't have to be.

What is an enterprise hybrid cloud? What are the advantages of cloud? How do I get started? What are the benefits of cloud? How do I know if cloud is right for me? How secure is my data? What should I look for in a service provider? How critical are service level guarantees? What are the business benefits? What about virtualization? How important is investment? Which cloud is right for me?

Start with a Plan,
Finish with
Success!
